

PALLET-BOT PLUS

ROBOTIC PALLETIZER

The **Pallet-Bot Plus** offers a variation for ease of pallet handling. The **Pallet-Bot Plus** is equipped with a heavy-duty powered pallet conveyor, which discharges full pallets from the robot cell automatically upon completion. The robot picks an empty pallet from the pallet stack and places it on the pallet conveyor.

Full pallets are removed by forklift.

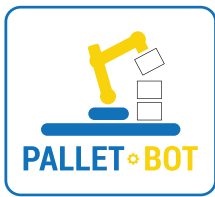

The **Pallet-Bot Plus** model greatly reduces the demand for forklift and pallet jack traffic, freeing up personnel's time to complete other tasks.

If no corrugated sheets are used, and faster case rates are demanded by your operation, the **Pallet-Bot Plus** can be a great asset to your operation.

All Pallet-Bot Robotic Palletizer models are:

- Completely integrated into a self-contained base frame that can be picked up and moved with a forklift.
- Pre-wired, pre-programmed and ships to you ready to get to work!

PALLET-BOT^{PLUS}

ROBOTIC PALLETIZER
